Summary

Software engineer who designs, builds, and ships **production-live** backend systems in **Python**. Strong in **REST API design**, **databases**, **system design**, and **concurrency** — designed and operate four live products end-to-end on self-hosted **Linux**. **Top 1.5% on LeetCode**; fast, independent learner with paid client experience.

Technical Skills

Languages: Python (Proficient), SQL, JavaScript, TypeScript, C, C++, Java.

Backend & APIs: FastAPI, Django, REST API design, JSON, WebSocket, JWT authentication, async I/O (asyncio).

Databases: PostgreSQL, MySQL, SQLite, Redis.

DevOps & Cloud: Docker, Nginx, Linux, Git & GitHub (version control), CI/CD, Cloudflare, Google Cloud (cert), Postman.

Core CS: Data Structures & Algorithms, System Design, Concurrency, Object-Oriented Programming, API development, debugging, unit & integration testing, problem-solving; Applied ML (CLIP embeddings, semantic search, NumPy).

Experience

Software Developer (Freelance) — Niroskos

Jan – Mar 2026

Paid contract / Travel-Booking Platform / Remote

- Delivered **3 production Django apps (10,000+ lines)** in **Agile, iterative collaboration** with a paid client — an **object-oriented** payments module and a Redis-cached **REST/JSON** checkout.
- Wrote a **500+ line integration test suite** that caught N+1, pricing, and locale defects across **15+ locales** before release.

Projects

PersonalS3 — Self-Hosted S3-Compatible Object Store

May – Jun 2026

Python / PostgreSQL / Docker / [Live](#)

- Architected and operate a **production-live**, self-hosted **S3-compatible object store (10 Docker services)** on one Linux server, exposed globally via Cloudflare Tunnel.
- Authored the **Python data-processing pipeline** end-to-end (Postgres job queue, hardware-accelerated transcoding) and designed a Merkle-trie integrity engine that cut cleaner cost from ~2 min to <10 ms.

URL Shortener — Production-Grade Backend Service

Jan – Apr 2026

FastAPI / Redis / PostgreSQL / [GitHub](#)

- Re-architected the **system design** (Redis as source of truth) to scale a **FastAPI** backend from 200 to **2,000 concurrent users at 0% errors**.
- Sustained **340 RPS** (load-tested with Locust) via a write-behind **concurrency** sidecar; deployed with Docker + Gunicorn/Uvicorn.

gitDeploy — Deployment Automation Platform

2025 – 2026

FastAPI / WebSocket / Docker / Nginx / [Live](#)

- Built a **CI/CD** platform automating GitHub-to-Docker deploys behind one **REST API** call, with WebSocket live logs and dynamic port allocation.

PicLocker — Semantic Image Search

May – Jun 2026

Python / CLIP / NumPy / SQLite

- Built a **semantic image-search** system — CLIP embeddings ranked by cosine similarity over an in-RAM index, with crash-safe ingestion and perceptual-hash deduplication.

Education

Pranveer Singh Institute of Technology (PSIT), Kanpur

2023 – 2027

B.Tech, Computer Science (Data Science Specialisation) | CGPA **8.078**

Achievements

- Top 1.5% (536th / 36,461)** in LeetCode Biweekly Contest 177 (all 4 solved); Codeforces Pupil (1223); **400+ problems** solved.
- Certifications:** Python for Data Science, AI & Development (IBM); Data Analysis with Python (IBM).
